Preface	xv
Chapter 0 Introduction	1
Chapter 1 Introducing the Chow ring	13
1.1 The goal of intersection theory	14
1.2 The Chow ring	15
1.2.1 Cycles	15
1.2.2 Rational equivalence and the Chow group	16
1.2.3 Transversality and the Chow ring	17
1.2.4 The moving lemma	19
1.3 Some techniques for computing the Chow ring	22
1.3.1 The fundamental class	22
1.3.2 Rational equivalence via divisors	22
1.3.3 Affine space	24
1.3.4 Mayer–Vietoris and excision	24
1.3.5 Affine stratifications	26
1.3.6 Functoriality	28
1.3.7 Dimensional transversality and multiplicities	31
1.3.8 The multiplicity of a scheme at a point	33
1.4 The first Chern class of a line bundle	37
1.4.1 The canonical class	39
1.4.2 The adjunction formula	40
1.4.3 Canonical classes of hypersurfaces and complete intersections	41
1.5 Exercises	42
Chapter 2 First examples	43
2.1 The Chow rings of \mathbb{P}^n and some related varieties	44
2.1.1 Bézout’s theorem	46

2.1.2	Degrees of Veronese varieties	48
2.1.3	Degree of the dual of a hypersurface	49
2.1.4	Products of projective spaces	51
2.1.5	Degrees of Segre varieties	52
2.1.6	The class of the diagonal	53
2.1.7	The class of a graph	54
2.1.8	Nested pairs of divisors on \mathbb{P}^1	55
2.1.9	The blow-up of \mathbb{P}^n at a point	56
2.1.10	Intersection multiplicities via blow-ups	61
2.2	Loci of singular plane cubics	62
2.2.1	Reducible cubics	64
2.2.2	Triangles	65
2.2.3	Asterisks	65
2.3	The circles of Apollonius	66
2.3.1	What is a circle?	66
2.3.2	Circles tangent to a given circle	67
2.3.3	Conclusion of the argument	68
2.4	Curves on surfaces	68
2.4.1	The genus formula	69
2.4.2	The self-intersection of a curve on a surface	70
2.4.3	Linked curves in \mathbb{P}^3	70
2.4.4	The blow-up of a surface	72
2.4.5	Canonical class of a blow-up	73
2.4.6	The genus formula with singularities	74
2.5	Intersections on singular varieties	75
2.6	Exercises	78

Chapter 3 Introduction to Grassmannians and lines in \mathbb{P}^3 85

3.1	Enumerative formulas	85
3.1.1	What are enumerative problems, and how do we solve them?	86
3.1.2	The content of an enumerative formula	87
3.2	Introduction to Grassmannians	89
3.2.1	The Plücker embedding	90
3.2.2	Covering by affine spaces; local coordinates	92
3.2.3	Universal sub and quotient bundles	95
3.2.4	The tangent bundle of the Grassmannian	96
3.2.5	The differential of a morphism to the Grassmannian	99

3.2.6	Tangent spaces via the universal property	100
3.3	The Chow ring of $\mathbb{G}(1, 3)$	102
3.3.1	Schubert cycles in $\mathbb{G}(1, 3)$	102
3.3.2	Ring structure	105
3.4	Lines and curves in \mathbb{P}^3	110
3.4.1	How many lines meet four general lines?	110
3.4.2	Lines meeting a curve of degree d	111
3.4.3	Chords to a space curve	113
3.5	Specialization	115
3.5.1	Schubert calculus by static specialization	115
3.5.2	Dynamic projection	117
3.5.3	Lines meeting a curve by specialization	120
3.5.4	Chords via specialization: multiplicity problems	121
3.5.5	Common chords to twisted cubics via specialization	122
3.6	Lines and surfaces in \mathbb{P}^3	122
3.6.1	Lines lying on a quadric	122
3.6.2	Tangent lines to a surface	123
3.7	Exercises	125

Chapter 4 Grassmannians in general 131

4.1	Schubert cells and Schubert cycles	132
4.1.1	Schubert classes and Chern classes	134
4.1.2	The affine stratification by Schubert cells	135
4.1.3	Equations of the Schubert cycles	138
4.2	Intersection products	139
4.2.1	Transverse flags	139
4.2.2	Intersections in complementary dimension	141
4.2.3	Varieties swept out by linear spaces	144
4.2.4	Pieri's formula	145
4.3	Grassmannians of lines	147
4.4	Dynamic specialization	150
4.5	Young diagrams	152
4.5.1	Pieri's formula for the other special Schubert classes	154
4.6	Linear spaces on quadrics	155
4.7	Giambelli's formula	157
4.8	Generalizations	159
4.8.1	Flag manifolds	159
4.8.2	Lagrangian Grassmannians and beyond	160
4.9	Exercises	161

Chapter 5	Chern classes	165
5.1	Introduction: Chern classes and the lines on a cubic surface	165
5.2	Characterizing Chern classes	167
5.3	Constructing Chern classes	170
5.4	The splitting principle	172
5.5	Using Whitney's formula with the splitting principle	173
5.5.1	Tensor products with line bundles	174
5.5.2	Tensor product of two bundles	176
5.6	Tautological bundles	177
5.6.1	Projective spaces	177
5.6.2	Grassmannians	178
5.7	Chern classes of varieties	179
5.7.1	Tangent bundles of projective spaces	179
5.7.2	Tangent bundles to hypersurfaces	179
5.7.3	The topological Euler characteristic	180
5.7.4	First Chern class of the Grassmannian	183
5.8	Generators and relations for $A(G(k, n))$	183
5.9	Steps in the proofs of Theorem 5.3	187
5.9.1	Whitney's formula for globally generated bundles . .	187
5.10	Exercises	191
Chapter 6	Lines on hypersurfaces	193
6.1	What to expect	194
6.1.1	Definition of the Fano scheme	196
6.2	Fano schemes and Chern classes	198
6.2.1	Counting lines on cubics	199
6.3	Definition and existence of Hilbert schemes	201
6.3.1	A universal property of the Grassmannian	201
6.3.2	A universal property of the Fano scheme	203
6.3.3	The Hilbert scheme and its universal property	203
6.3.4	Sketch of the construction of the Hilbert scheme . .	205
6.4	Tangent spaces to Fano and Hilbert schemes	208
6.4.1	Normal bundles and the smoothness of the Fano scheme	208
6.4.2	First-order deformations as tangents to the Hilbert scheme	212
6.4.3	Normal bundles of k -planes on hypersurfaces	219
6.4.4	The case of lines	223
6.5	Lines on quintic threefolds and beyond	227

6.6	The universal Fano scheme and the geometry of families of lines	229
6.6.1	Lines on the quartic surfaces in a pencil	233
6.7	Lines on a cubic with a double point	234
6.8	The Debarre–de Jong Conjecture	236
6.8.1	Further open problems	238
6.9	Exercises	240
Chapter 7	Singular elements of linear series	244
7.1	Singular hypersurfaces and the universal singularity	245
7.2	Bundles of principal parts	247
7.3	Singular elements of a pencil	251
7.3.1	From pencils to degeneracy loci	251
7.3.2	The Chern class of a bundle of principal parts	252
7.3.3	Triple points of plane curves	256
7.3.4	Cones	257
7.4	Singular elements of linear series in general	258
7.4.1	Number of singular elements of a pencil	259
7.4.2	Pencils of curves on a surface	260
7.4.3	The second fundamental form	262
7.5	Inflection points of curves in \mathbb{P}^r	265
7.5.1	Vanishing sequences and osculating planes	266
7.5.2	Total inflection: the Plücker formula	268
7.5.3	The situation in higher dimension	272
7.6	Nets of plane curves	273
7.6.1	Class of the universal singular point	273
7.6.2	The discriminant of a net of plane curves	274
7.7	The topological Hurwitz formula	277
7.7.1	Pencils of curves on a surface, revisited	279
7.7.2	Multiplicities of the discriminant hypersurface	280
7.7.3	Tangent cones of the discriminant hypersurface	282
7.8	Exercises	285
Chapter 8	Compactifying parameter spaces	289
8.1	Approaches to the five conic problem	290
8.2	Complete conics	293
8.2.1	Informal description	293
8.2.2	Rigorous description	296
8.2.3	Solution to the five conic problem	302

	8.2.4 Chow ring of the space of complete conics	306
8.3	Complete quadrics	309
8.4	Parameter spaces of curves	310
	8.4.1 Hilbert schemes	310
	8.4.2 Report card for the Hilbert scheme	311
	8.4.3 The Kontsevich space	312
	8.4.4 Report card for the Kontsevich space	316
8.5	How the Kontsevich space is used: rational plane curves	317
8.6	Exercises	321

Chapter 9 Projective bundles and their Chow rings 323

9.1	Projective bundles and the tautological divisor class	323
	9.1.1 Example: rational normal scrolls	324
9.2	Maps to a projective bundle	327
9.3	Chow ring of a projective bundle	331
	9.3.1 The universal k -plane over $\mathbb{G}(k, n)$	335
	9.3.2 The blow-up of \mathbb{P}^n along a linear space	337
	9.3.3 Nested pairs of divisors on \mathbb{P}^1 revisited	339
9.4	Projectivization of a subbundle	340
	9.4.1 Ruled surfaces	341
	9.4.2 Self-intersection of the zero section	343
9.5	Brauer–Severi varieties	344
9.6	Chow ring of a Grassmannian bundle	346
9.7	Conics in \mathbb{P}^3 meeting eight lines	347
	9.7.1 The parameter space as projective bundle	348
	9.7.2 The class δ of the cycle of conics meeting a line	349
	9.7.3 The degree of δ^8	350
	9.7.4 The parameter space as Hilbert scheme	350
	9.7.5 Tangent spaces to incidence cycles	352
	9.7.6 Proof of transversality	354
9.8	Exercises	355

Chapter 10 Segre classes and varieties of linear spaces 362

10.1	Segre classes	362
10.2	Varieties swept out by linear spaces	366
10.3	Secant varieties	367
	10.3.1 Symmetric powers	367

10.3.2	Secant varieties in general	369
10.4	Secant varieties of rational normal curves	373
10.4.1	Secants to rational normal curves	373
10.4.2	Degrees of the secant varieties	375
10.4.3	Expression of a form as a sum of powers	376
10.5	Special secant planes	377
10.5.1	The class of the locus of secant planes	378
10.5.2	Secants to curves of positive genus	380
10.6	Dual varieties and conormal varieties	380
10.6.1	The universal hyperplane as projectivized cotangent bundle	382
10.7	Exercises	385
Chapter 11	Contact problems	389
11.1	Lines meeting a surface to high order	390
11.1.1	Bundles of relative principal parts	391
11.1.2	Relative tangent bundles of projective bundles	393
11.1.3	Chern classes of contact bundles	394
11.2	The case of negative expected dimension	396
11.2.1	Lines on smooth surfaces in \mathbb{P}^3	397
11.2.2	The flecnodal locus	400
11.3	Flexes via defining equations	401
11.3.1	Hyperflexes	403
11.3.2	Flexes on families of curves	405
11.3.3	Geometry of the curve of flex lines	408
11.4	Cusps of plane curves	409
11.4.1	Plane curve singularities	410
11.4.2	Characterizing cusps	413
11.4.3	Solution to the enumerative problem	414
11.4.4	Another approach to the cusp problem	417
11.5	Exercises	420
Chapter 12	Porteous' formula	426
12.1	Degeneracy loci	426
12.2	Porteous' formula for $M_0(\varphi)$	429
12.3	Proof of Porteous' formula in general	430
12.3.1	Reduction to a generic case	430
12.3.2	Relation to the case $k = 0$	431
12.3.3	Pushforward from the Grassmannian bundle	432

12.4	Geometric applications	433
12.4.1	Degrees of determinantal varieties	433
12.4.2	Pinch points of surfaces	436
12.4.3	Pinch points and the tangential variety of S	439
12.4.4	Quadriseccants to rational curves	440
12.5	Exercises	442

Chapter 13 Excess intersections and the Chow ring of a blow-up 445

13.1	First examples	447
13.1.1	The intersection of a divisor and a subvariety	447
13.1.2	Three surfaces in \mathbb{P}^3 containing a curve	449
13.2	Segre classes of subvarieties	453
13.3	The excess intersection formula	454
13.3.1	Heuristic argument for the excess intersection formula	456
13.3.2	Connected components versus irreducible components	458
13.3.3	Two surfaces in \mathbb{P}^4 containing a curve	459
13.3.4	Quadrics containing a linear space	460
13.3.5	The five conic problem	462
13.3.6	Intersections of hypersurfaces in general: Vogel's approach	464
13.4	Intersections in a subvariety	465
13.4.1	Specialization to the normal cone	467
13.4.2	Proof of the key formula	468
13.5	Pullbacks to a subvariety	469
13.5.1	The degree of a generically finite morphism	470
13.6	The Chow ring of a blow-up	471
13.6.1	The normal bundle of the exceptional divisor	472
13.6.2	Generators of the Chow ring	473
13.6.3	Example: the blow-up of \mathbb{P}^3 along a curve	473
13.6.4	Relations on the Chow ring of a blow-up	476
13.7	Exercises	477

Chapter 14 The Grothendieck Riemann–Roch theorem 481

14.1	The Riemann–Roch formula for curves and surfaces	481
14.1.1	Curves	481
14.1.2	Surfaces	483

14.2	Arbitrary dimension	484
14.2.1	The Chern character	484
14.2.2	The Todd class	487
14.2.3	Hirzebruch Riemann–Roch	488
14.3	Families of bundles	489
14.3.1	Grothendieck Riemann–Roch	489
14.3.2	Example: Chern classes of $\mathrm{Sym}^3 \mathcal{S}^*$ on $\mathbb{G}(1, 3)$	490
14.4	Application: jumping lines	493
14.4.1	Loci of bundles on \mathbb{P}^1 with given splitting type	494
14.4.2	Jumping lines of bundles of rank 2 on \mathbb{P}^2	497
14.4.3	Examples	501
14.5	Application: invariants of families of curves	502
14.5.1	Example: pencils of quartics in the plane	504
14.5.2	Proof of the Mumford relation	506
14.6	Exercises	507
Appendix A	The moving lemma	511
A.1	Generic transversality to a cycle	512
A.2	Generic transversality to a morphism	518
Appendix B	Direct images, cohomology and base change	520
B.1	Can you define a bundle by its fibers?	520
B.2	Direct images	523
B.3	Higher direct images	528
B.4	The direct image complex	533
B.5	Proofs of the theorems on cohomology and base change	535
B.6	Exercises	540
Appendix C	Topology of algebraic varieties	543
C.1	GAGA theorems	543
C.2	Fundamental classes and Hodge theory	544
C.2.1	Fundamental classes	544
C.2.2	The Hodge decomposition	546
C.2.3	The Hodge diamond	548
C.2.4	The Hodge conjecture	549
C.3	Comparison of rational equivalence with other cycle theories	550

C.3.1	Algebraic equivalence	551
C.3.2	Algebraic cycles modulo homological equivalence	552
C.3.3	Numerical equivalence	552
C.3.4	Comparing the theories	553
C.4	The Lefschetz hyperplane theorem	553
C.4.1	Applications to hypersurfaces and complete intersections	554
C.4.2	Extensions and generalizations	557
C.5	The hard Lefschetz theorem and Hodge–Riemann bilinear relations	558
C.6	Chern classes in topology and differential geometry	559
C.6.1	Chern classes and obstructions	560
C.6.2	Chern classes and curvature	561
Appendix D	Maps from curves to projective space	564
D.1	What maps to projective space do curves have?	565
D.1.1	The Riemann–Roch theorem	567
D.1.2	Clifford’s theorem	569
D.1.3	Castelnuovo’s theorem	570
D.2	Families of divisors	571
D.2.1	The Jacobian	571
D.2.2	Abel’s theorem	572
D.2.3	Moduli spaces of divisors and line bundles	575
D.3	The Brill–Noether theorem	576
D.3.1	How to guess the Brill–Noether theorem and prove existence	578
D.3.2	How the other half is proven	579
D.4	W_d^r as a degeneracy locus	580
D.4.1	The universal line bundle	580
D.4.2	The evaluation map	582
D.5	Natural classes in the cohomology ring of the Jacobian	583
D.5.1	Poincaré’s formula	585
D.5.2	Symmetric powers as projective bundles	587
D.5.3	Chern classes from the symmetric power	589
D.5.4	The class of W_d^r	590
D.6	Exercises	592
